The Medicaid program is a partnership between the federal and state governments that pays for healthcare services for approximately 3.18 million Ohioans with low incomes (see figure 1), including more than 1.28 million children. In state fiscal year (SFY) 2020, federal and state expenditures on Medicaid accounted for about 38% of Ohio’s budget. Additionally, $1 out of every $6 spent on health care in the U.S. is spent on Medicaid.

The federal government finances a significant portion of state Medicaid programs. States are required to provide coverage for certain federally-defined eligibility groups and services. States can also receive federal funding for optional groups and services. The specific parameters around who is covered and what services are covered are defined through a combination of federal and state statutes, rules and regulations and administrative decisions.

3 key findings for policymakers

- Ohio Medicaid provides healthcare coverage for about 3.18 million Ohioans with low incomes, including many individuals who cannot afford private or employer-sponsored health insurance.
- Medicaid is a significant share of government spending in Ohio. In state fiscal year 2020, Medicaid expenditures from state and federal funding sources accounted for about 38% of the state’s spending.
- Ohio Medicaid has implemented changes to streamline administrative processes, increase transparency and improve access to care and care coordination for Ohioans. Going forward, policymakers should monitor implementation and evaluate recent changes to the program.
As the payor of healthcare services for more than a quarter of all Ohioans, Medicaid can be leveraged to make large-scale policy changes that impact the health of residents. For example, the federal government can grant flexibility to states and even waive certain requirements as long as the statutory goals of the program are met. However, even with substantial federal financial participation, the high cost of the program is a challenge for state finances. Policymakers must balance the benefits of providing healthcare coverage with the cost of paying for services.

This publication provides an overview of the Medicaid program in Ohio, including information on Medicaid eligibility, covered services, delivery systems, financing, spending and recent policy and programmatic changes.

What are the differences between Medicaid and Medicare?

Medicaid is a federal-state partnership in which individual states administer the program and the federal government sets guidelines and provides partial funding. By contrast, Medicare is fully operated, administered and financed by the federal government. Medicare primarily serves Americans ages 65 and older. Medicaid serves low-income individuals of all ages and other groups determined to be eligible. Figure 2 outlines key differences between the Medicaid and Medicare programs.

Some people are covered by both Medicaid and Medicare; see the explanation of dual-eligible beneficiaries on page 11.

How is Medicaid financed?
The Medicaid program is financed jointly by the federal government and states through a payment arrangement called the Federal Medical Assistance Percentage (FMAP). State spending on healthcare services provided by Medicaid are matched by the federal government at a rate between 50% and 78.3%. State FMAPs are determined using a formula that accounts for per-capita income in the state compared to per-capita income in the U.S.

States are eligible for enhanced FMAP for enrollees in the Children’s Health Insurance Program (CHIP) and Medicaid Group VIII eligibility categories, described on page 5 and 6, respectively.

Ohio’s FMAP for federal fiscal year (FFY) 2022 is 64.1% for most enrollees and 74.9% for CHIP enrollees (down from 78.9% in FFY 2021). The federal match for enrollees in Medicaid Group VIII is 90%.

Other costs associated with the Medicaid program are also shared with the federal government. Most administrative costs are matched at 50%, but some services, such as training for medical personnel, upgrades to health information technology and translation or interpretation services, are matched at higher rates. Page 3 highlights significant changes Ohio has made to the program in the past year, which affect financing and administration of Medicaid in the state.

How has the COVID-19 pandemic impacted Medicaid?

The economic downturn stemming from the COVID-19 pandemic led to increased Medicaid enrollment. In Ohio, Medicaid enrollment increased by approximately 13.6% from March 2020 to March 2021, growing from about 2.79 million to 3.18 million enrollees. This increase in enrollment represents a reversal of the downward trend in Medicaid enrollment from 2017 to 2020, shown in figure 8 on page 7.

On Jan. 31, 2020, the U.S. Department of Health and Human Services (HHS) declared a Public Health Emergency (PHE), allowing the federal government to divert federal funds, health personnel and services in response to the COVID-19 pandemic. Additionally, the Families First Coronavirus Response Act (FFCRA), passed in March 2020, provided states with a 6.2 percentage point increase in the federal share of Medicaid spending, enhancing FMAP until the end of the quarter when the PHE expires. Enhanced FMAP makes it easier for states to finance Medicaid programs, particularly given increases in enrollment.

The enhanced FMAP is contingent on a “maintenance of eligibility” (MOE) provision in the FFCRA. The MOE provision requires states to maintain eligibility for individuals served by Medicaid throughout the federally declared PHE and prohibits termination of coverage or changes in eligibility criteria or requirements during the PHE. As of April 29, 2021, the PHE was still in effect and will likely be renewed for the duration of 2021.

Notably, increased enrollment in Medicaid and conditions of the COVID-19 pandemic have also created new administrative challenges for states, including managing transitions to telework for employees of agencies administering Medicaid, an increased volume of applications to process and quickly changing federal guidelines that impact coverage and care.

Who is eligible for Medicaid coverage?

The federal government allows states to set certain guidelines for Medicaid eligibility. For example, in addition to income, Ohio uses categories based on age, household characteristics and medical need to further determine Medicaid eligibility and coverage. To be eligible for Medicaid in Ohio, a person must, at a minimum, be an Ohio resident, have or apply for a Social Security number and have U.S. citizenship or meet non-U.S. citizenship requirements.

Figure 3 provides a high-level overview of the Ohio Medicaid eligibility categories with the majority of enrollees.

The income eligibility limit for most Ohio Medicaid enrollees is set as a percentage of the Federal Poverty Level (FPL) (see figure 4), based on household Modified Adjusted Gross Income (MAGI), and is determined monthly.

---

**Who is eligible?**

- **Children** ages 18 and younger in households with incomes up to 211% of the FPL with no insurance and up to 161% with non-Medicaid health coverage
- **Parents** or related caregivers in households with incomes up to 90% FPL and one or more children younger than 18 in the household
- **Pregnant women** with incomes up to 205% FPL
- **Adults** ages 19 to 64 who have incomes less than 138% FPL
- **Older Ohioans and those who are blind or disabled** with lower incomes

**Categories**

- Covered Families and Children (CFC)
- Group VIII
- Aged, Blind and Disabled (ABD)

---

Note: This graphic highlights the major categories of Medicaid eligibility in Ohio and is not comprehensive. See the appendix for a more detailed explanation of all eligibility categories for Ohio Medicaid. People in need of Medicaid should apply at [benefits.ohio.gov](http://benefits.ohio.gov).
Medicaid eligibility categories

The majority of Ohioans enrolled in Medicaid fall within one of the following categories: Covered Families and Children (CFC), individuals covered under Group VIII and Aged, Blind and Disabled (ABD). Figure 5 shows income eligibility thresholds for MAGI-categories by FPL for 2021.

Covered Families and Children (CFC)

CFC includes children, pregnant women, parents and related caregivers in Ohio. As of March 2021, 69.1% of the nearly 1.77 million individuals enrolled in Ohio Medicaid’s CFC category were children (see figure 6).

Group VIII

In 2014, Ohio expanded Medicaid coverage to include eligibility for adults ages 19 to 64 who have incomes less than 138% of the FPL and are not eligible for other categories of Medicaid. The Affordable Care Act (ACA) authorized and provided additional federal funding for this policy change. Since the beginning of the COVID-19 pandemic, enrollment in Group VIII has grown considerably, to about 775,000 in March 2021, reversing a prior downward trend in enrollment.

As part of the 2018-2019 state budget legislation, the Ohio General Assembly required ODM to seek a waiver from the federal government to mandate “community engagement activities” for Ohioans receiving Medicaid Group VIII coverage (i.e., work requirements). ODM submitted the waiver to the Centers for Medicare and Medicaid Services (CMS), was granted approval for the waiver and intended to implement the requirements in January 2021. However, implementation has been delayed due to the MOE requirement associated with the COVID-19 pandemic Public Health Emergency (see box on page 4).
Aged, Blind and Disabled (ABD)
ABD includes individuals with low incomes who are ages 65 or older (aged), are blind or have a disability.\textsuperscript{33} Because people covered in ABD have significant healthcare needs, this group accounts for a high proportion of Medicaid spending in Ohio (see figure 7). The ABD category has different rules for counting income than other Medicaid eligibility categories, including income eligibility limit\textsuperscript{34} and resource limit\textsuperscript{35} (e.g., assets including cash, stocks, bank accounts and property), although not all resources (e.g., the primary home) are included in the limit. Income and resource limits for this category are the same as those for the federal Supplemental Security Income (SSI) program.\textsuperscript{36}

What services does Medicaid cover?
States are required to provide federally-mandated benefits, including health benefits deemed essential by the ACA and Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) services. Ohio provides additional services, including vision and dental care and prescription drug coverage (see figure 8). Some services require a determination of medical necessity, prior authorization or a co-payment, while other services are limited in duration and scope.

- Federally qualified health center services
- Transportation for medical care
- Certified pediatric and family nurse practitioners

**Optional services covered by Ohio Medicaid**
- Ambulance
- Chiropractic services
- Alcohol and drug screening analysis
- Intensive outpatient (to treat addiction)
- Methadone administration
- Medical and surgical dental care
- Durable medical equipment and supplies
- Medical and surgical vision care
- Individual or group counseling
- Occupational therapy
- Podiatry
- Prescription drugs
- Private duty nursing
- Speech therapy
- Ambulatory surgical centers
- Telehealth
- Behavioral and mental health

Other Medicaid eligibility categories

Only 4.4% of Ohio Medicaid enrollees in March 2021 were in categories other than CFC, ABD or Group VIII. People enrolled in other Medicaid categories have access to a limited set of services or are enrolled only for a limited period of time. For a detailed description of other Ohio Medicaid eligibility categories, see appendix.

Why do people enroll in Medicaid?

Many Ohioans with low incomes enroll in Medicaid because other health insurance coverage is unavailable, is too expensive or provides inadequate coverage for necessary services, such as long-term support services (LTSS), nursing facility care, adult day programs, home healthcare services and paratransit. Medicare and private health insurance typically do not provide access to these services.

Price of individual (non-group) health insurance coverage

If not for Medicaid, the price of health insurance would be cost prohibitive to many Ohioans. For plan year 2020, the average unsubsidized premium on the ACA marketplace for an individual in Ohio was $522 per month. For a single person with an income of 138% FPL, this would account for more than one-third (35.2%) of their monthly income.

Low employer-sponsored health insurance rates

Part-time and/or low-wage workers are generally less likely to be offered employer-sponsored health insurance (ESI). In the U.S. during 2018, 33.2% of workers with household incomes below the FPL were offered ESI, compared to 78.7% of workers with household incomes above 400% of
During 2019, 23% of part-time employees (working less than 35 hours weekly) were offered ESI, as opposed to 87% of full-time workers.

Coverage for long-term services and supports (LTSS)
Medicare and private health insurance plans generally do not cover LTSS provided in a long-term care facility. People with low incomes, few assets and no long-term care insurance may apply for Medicaid in order to access LTSS.

How do people enrolled in Medicaid access healthcare services?
In Ohio, Medicaid coverage is provided through either managed care plans (MCPs) or a fee-for-service arrangement. As of March 2021, 88.2% of Ohioans utilizing Medicaid were enrolled in an MCP. Only 7.4% of Ohioans utilizing Medicaid were enrolled in the fee-for-service (FFS) system. The other 4.4% of Ohioans utilizing Medicaid have limited coverage, which is classified differently than coverage from a MCP or in the FFS system.

Managed care plans (MCPs)
MCPs are administered by privately-operated health insurance companies that contract with providers, such as physicians and hospitals, to deliver Medicaid-covered services to enrollees. MCPs pay for care for Ohio Medicaid enrollees in exchange for a capitation payment, which is a set per-member, per-month (PMPM) payment that is adjusted annually by the Medicaid program. The MCP covers costs incurred by members, including expenses above the capitation payment. The MCP is paid for the entire capitation payment, even if actual member costs are less than the capitation payment. The MCP reimbursement structure is intended to reduce costs and create incentives for improved quality, coordination and continuity of care.

Fee-for service
Individuals who are not enrolled in Medicaid MCPs receive services through the FFS system. Populations currently served through the FFS system include Ohioans with developmental disabilities and others living in an institution or with a Medicaid waiver, some people who are dually eligible for Medicaid and Medicare and Ohioans who recently enrolled in Medicaid and have not yet selected or been automatically enrolled in an MCP. Under FFS, Medicaid providers are paid directly by ODM for each covered service (such as an office visit, test or procedure) at rates outlined in an appendix to the Ohio Administrative Code.

How much does Ohio Medicaid cost and how it is funded?
In SFY 2020, federal and state expenditures on Medicaid accounted for about 38% of Ohio’s budget. In SFY 2020, the federal share of Ohio’s Medicaid program was about 70%, or slightly less than $19.8 billion. Ohio’s General Revenue Fund (GRF) contributed about $4.9 billion, or 17% (see figure 10). The remaining $3.5 billion came from non-GRF state sources, including fees paid by hospitals, health insurance companies and nursing facilities.

Between SFYs 2010 and 2020, total federal and state spending on Ohio’s Medicaid program grew by an average of 5.9% per year, from about $15.9 billion in SFY 2010 to over $28.2 billion in SFY 2020 (see figure 11).

The state share of Medicaid program spending is projected to increase by $1.48 billion from SFY 2022 to SFY 2023 due, in part, to the discontinuation of the 6.2% enhanced FMAP that the federal government has provided states during the COVID-19 pandemic.

Figure 10. Ohio Medicaid spending, by revenue source, SFY 2020

Source: Ohio Legislative Services Commission
Figure 11. Ohio Medicaid spending, in billions, SFY 2010 – SFY 2020

Source: Ohio Department of Medicaid (via Ohio Legislative Service Commission)

Conclusion
The Medicaid program provides access to healthcare services for more than three million Ohioans. For people who are sick or injured, access to care can mean the difference between a timely return to health or prolonged illness. For individuals with chronic diseases, mental health conditions or substance use disorder, Medicaid coverage provides a means to pay for healthcare services, enabling work and active engagement in the community. Medicaid also pays for preventive services and provides a financial safety net for costs related to medical emergencies.

The Medicaid program plays a critical role in maintaining and improving the health of many Ohioans. As the COVID-19 pandemic continues to have a significant impact on the healthcare system and economy in Ohio, policymakers should monitor changing guidance from the federal government and be agile in their response to new challenges facing Medicaid enrollees. State policymakers and other stakeholders must also balance the program’s benefits with budgetary and administrative challenges to improve health and health value in Ohio.
